

## **Research at Hope Cape Town**

HOPE Cape Town has realised the real benefits of partnering with academic institutions and experts in the field. We collaborate with Stellenbosch University on a number of levels, including doing research projects that aim to answer practical questions concerning the care of HIV positive children and their families.

The HOPE doctors have been involved in a wide variety of research projects over the years; often in partnership with members of the Faculty of Medicine and Health Sciences at Stellenbosch University. HOPE Cape Town has also financially supported the work of senior researchers at Tygerberg Hospital.

Research benefits both the medical field and the community - by advancing medical knowledge and understanding as well as informing clinical practise - which ultimately improves the care and experience of the children and families that we serve.
